1. Took the time series approch for this problem using LSTM(timeseries generator)
2. we can take (a).Traditional Regression approch
    (b).Arima ,SARIMAX
    (c).Fbprophet
3.I tired with diffrent approchs not able to do the right way.Traditional ML and Fbprophet gave me wrong output(di dnot work) most of the time.

4.Improvements-Main things is to run more and more Epochs and adding more layers we can improve this.It was really taking hours of time to train the model.
  though the data points is huge in size we should train the model using batch of data.
5.Since i was not working in Time series data for a long time not able to deliver it in right way.If you could suggest me the right way i can fix this.Just need few references
